---

Click on the toolbox on the lower right-hand menu and select the watering can from the pop-up menu. Move the green square that appears over the flowers you would like to water. Hold down the mouse button, not simply click (you don't have to hold it down too long though) to activate the watering process. All the flowers beneath the square will be watered, and 1 coin will be deducted for each flower/plant watered within that square. This process will fill all the raindrops regardless of how many drops were empty when you started.
